

Feedback for elective course at hematology unit, PMK hospital

1. ห้องแลป

The lab was interesting for me as I was able to see a different perspective of this field, carrying out research. I have gained new knowledge on how doctors diagnosed an individual illness from the collected specimen (eg/blood or urine samples) with help from the team of medical technologists.

2. พยาธิวิทยา

There were a few highlights on this day, visiting the pathology department, museum of the preserved organs in the body as well as taught on how to collect blood samples. I was excited to get a hands-on experience for this, which would eventually be useful. The museum for me was awe-inspiring, wandering around looking at a wide range of organs affected by common and rare diseases. It made me want to explore further on the roots that caused these transformations or problem.

3. เยี่ยมคนไข้

From visiting the pediatric wards, I was slightly surprised by the number of patients one doctor is responsible for. Apart from treating them in some cases, they also help out with palliative care. I was able to see the daily life a doctor as he thoroughly does rounds to check up on his patients. It was inspiring to see the patients smiling and getting better from their illness.

4. OPD

During our time around the pediatrics OPD, I did get to observe nurses giving vaccinations and the process of the doctor examining the patient. It was fascinating to see the step by step process and how he made the diagnosis.

Thank you for this valuable work experience ka :)
